

ONE MAY ASK WHAT IS A BLOWER DOOR TEST

The quick answer is –

A test that all A.C. contractors must perform on a new home to make sure that every new home is within the required parameters for energy efficiency set forth by the Florida Energy Conservation Code.

Respect | Integrity | Innovation | Service Excellence

Effective July 1st 2017 a blower door test is required as per the Florida Building Energy Conservation Code. A condition will be auto populated into the system for **CO REQUIREMENT** on all **New** Single family and Multi Family Home construction. **The HVAC CONTRACTOR** is responsible to upload the test results into the system before Mechanical Final Inspection. At that time the test results will be reviewed by the assigned Mechanical Inspector to approve or deny at that point. Once the test report is approved, the assigned Mechanical inspector will update the condition in the system and release it as being met.
